

Rely on it.

An aesthetical solution with ecological material.

RENOLIT ALKORBRIGHT

Extra aesthetical appeal...

CHALLENGE

For the design of this **cultural centre in France** the architect wanted to use a **durable and ecological waterproofing** in addition to **extra aesthetical appeal**.

SOLUTION

One of our most durable and ecological products is the **RENOLIT ALKORBRIGHT** roofing membrane. This membrane is white in colour and has one of the highest cool roof characteristics worldwide due to its high solar reflection rates.

The membrane is produced with an invisible coating to give extra protection against UV radiation. For this project the architect wanted a metallic appearance of the roof. Because the **RENOLIT ALKORBRIGHT** roofing membrane does not have a matching DESIGN finish we suggested the architect used **RENOLIT ALKORBRIGHT** laminated metal sheets to create the aesthetical appearance required. This solution resulted in a homogeneous, durable and aesthetically pleasing roof surface.
